

What is claimed is:

1. A sharps disposal system, comprising:
  - a) a substantially rigid cabinet defining an inner chamber;
  - b) a sharps receptacle contained within said cabinet;
  - c) a first access door pivotally secured to said cabinet;
  - d) a second access door pivotally connected to said cabinet; and
  - e) lock means for locking said cabinet.
2. The sharps disposal system of claim 1 including a conduit depending downwardly from said first access door interfacing with said sharps receptacle providing a passageway for sharps to be deposited into said sharps receptacle.
3. The sharps disposal system of claim 2 wherein said sharps receptacle includes a lid having segmented fingers extending radially inward toward the center of said lid.
4. The sharps disposal system of claim 1 including a bracket secured within said inner chamber of said cabinet, said bracket centrally retaining said sharps receptacle within said inner chamber of said cabinet.
5. The sharps disposal system of claim 1 wherein said lock means comprises a single locking mechanism mounted on said first access door, said locking mechanism simultaneous locking said first access door and said second access door of said cabinet.
6. The sharps disposal system of claim 1 including a mounting bracket for securing said cabinet to a mounting surface.
7. The sharps disposal system of claim 6 wherein said mounting bracket includes inwardly offset flange members for receiving mounting bolts therethrough for securing said mounting bracket to a mounting surface.

8. The sharps disposal system of claim 7 wherein said cabinet is releasably secured to said mounting bracket.
9. The sharps disposal system of claim 8 wherein said cabinet overlaps said flange members of said mounting bracket preventing access to said mounting bolts.
10. The sharps disposal system of claim 1 including a removable cover for sealing said sharps receptacle upon removal thereof from said cabinet.
11. A sharps disposal system, comprising:
  - a) a substantially rigid cabinet defining an inner chamber;
  - b) a sharps receptacle contained within said cabinet;
  - c) double door access means providing access to said inner chamber for collecting and disposing of sharps deposited in said sharps receptacle; and
  - d) lock means for locking said cabinet.
12. The sharps disposal system of claim 11 wherein said double door access means comprises a first access door forming the top of said cabinet and a second access door forming a side of said cabinet.
13. The sharps disposal system of claim 12 including a conduit depending downwardly from said first access door interfacing with said sharps receptacle providing a passageway for sharps to be deposited into said sharps receptacle.
14. The sharps disposal system of claim 11 including a mounting bracket for securing said cabinet to a mounting surface.
15. The sharps disposal system of claim 11 wherein said lock means comprises a single locking mechanism for simultaneous locking said first and second access doors of said cabinet.

16. The sharps disposal system of claim 11 including a removable cover for sealing said sharps receptacle upon removal thereof from said cabinet.
17. A sharps disposal system, comprising:
  - a) a substantially rigid cabinet defining an inner chamber;
  - b) a sharps receptacle retained within said cabinet, said sharps receptacle including a removable cover for sealing said sharps receptacle upon removal thereof from said cabinet;
  - c) double door access means providing access to said inner chamber for collecting and disposing of sharps deposited in said sharps receptacle
  - d) a second access door pivotally connected to said cabinet; and
  - e) a lock for locking said double door access means of said cabinet.
18. The sharps disposal system of claim 17 wherein said double door access means comprises a first access door forming the top of said cabinet and a second access door forming a side of said cabinet.
19. The sharps disposal system of claim 18 including a conduit depending downwardly from said first access door interfacing with said sharps receptacle providing a passageway for sharps to be deposited into said sharps receptacle.
20. The sharps disposal system of claim 19 including a mounting bracket for securing said cabinet to a mounting surface.
